Magento 2 Dynamic HTML Sitemap

1. How Does It Work?

1.1 Overview: Generated detailed and useful sitemap including links to categories, products, cms pages and store view of of your site. This module helps to SEO performance of your business.

1.2 General configuration:

Please flush all cache flush make sure after change configuration then show this changes in sites.

Go to Admin->store->configuration->DSS->HTML Sitemap.

In **Enable**, choose Yes to enable the module, otherwise choose No.

In **HTML Sitemap URL Key**: Enter a URL key for the sitemap.

Note:

URLs of the sitemap are different per store:

For example, the URL key of the sitemap in store A is store-a and the URL key of the sitemap in store B is store-b. When customers access the sitemap of store A, then switch to store B, customers are redirected to the sitemap in store B under the right sitemap URL of store B.

Enter special characters to URL key or any spaces:

After saving configs, these special characters or spaces are auto removed and replaced by the dash(-).

In **Title of Site**, choose the title for the sitemap.

In **Session Order**, fill in the order of sessions to be displayed. Please fill in all 4 items separated by a coma. The ID of sessions as below:

1: Product List

2: Store View List

3: Additional Link List

4: Category and CMS Page List
